Bright TV Performance

A performance overview to guide viewership strategy and user highlight progress.

19 April 2026

Bright TV Overview

We analysed user behaviour across key dimensions including demographics, viewing time, and content performance. The insights show that engagement peaks during evening hours and is primarily driven by the 18–35 age group. However, we observed a noticeable decline in activity at the start of the week, particularly on Mondays and Tuesdays, which correlates with weaker content performance. Additionally, our analysis reveals that high viewership does not always translate to high engagement, highlighting an opportunity to prioritise and promote content that retains users for longer.

This shifts our focus from simply driving traffic to maximising engagement and retention, which is ultimately where long-term value lies.

Table of Content

- 01** Who Drives Consumption
- 05** Content by gender
- 02** Regional Demand
- 06** Average session duration
- 03** Peak views time
- 07** Age vs content
- 04** Day of week
- 08** Low consumption days strategy

Total Core Audience

Insight: The platform's engagement is primarily driven by the 26–35 age group, making them our core audience segment.

Recommendations:

- Prioritise content, marketing campaigns and platform features tailored to the 18–35 demographic to maximise engagement and retention.

Total Active Users by Province

Insight: User activity is concentrated in Top Province (Gauteng), indicating this is our strongest market and a key focus area for growth.

Recommendations:

- Increase targeted marketing and partnerships in high-performing provinces while developing strategies to grow underperforming regions.

Total Active Users by Gender vs Age

Insight: User activity is concentrated in Top Province (Gauteng), indicating this is our strongest market and a key focus area for growth.

Recommendations:

- Increase targeted marketing and partnerships in high performing provinces while developing strategies to grow underperforming regions.

Total Peak Viewing & Weekly Performance

Insight: Engagement peaks during the evening hours.

Recommendations:

- Schedule premium content releases, promotions, and notifications during evening peak hours to maximise reach and impact.

Total Weekday vs Weekend Performance

Insight: Viewership is strongest towards the end of the week, while Mondays and Tuesdays show a clear drop in engagement.

Recommendations:

- Introduce high-performing or exclusive content early in the week to stabilise engagement and reduce the drop-off.

Total Content Performance & Engagement

Insight: A small number of channels drive the majority of viewership.

Recommendation:

Double down on high-performing content while analysing and improving or phasing out consistently underperforming channels.

Insight: Some channels retain viewers longer, indicating stronger engagement.

Recommendation:

Prioritise and promote high-retention content to increase overall watch time and user stickiness.

Content by Gender & Low Days

Insight: Content preferences vary by gender.

Recommendations:

- Implement personalised recommendations and targeted content strategies based on gender preferences to improve user experience.

Insight: Low engagement early in the week is driven by weaker content performance.

Recommendations:

- Reposition top-performing content or introduce new releases on Mondays and Tuesdays to boost engagement during low-activity periods

Conclusion

These insights highlight clear opportunities to improve engagement.

To conclude, the data highlights three clear opportunities, focusing on our core audience, optimising for peak engagement times and prioritising content that retains users.

If we execute on these areas, we can significantly improve platform performance and unlock greater long-term value.
